## Recent Developments

### Global News

- **European Union** authorities yesterday recommended to remove the United States from its safe travel list, which will see fresh restrictions on nonessential travel and unvaccinated travellers. Those on essential travel or fully vaccinated with an EU- or WHO-approved vaccine, should be allowed entry. Still, it is up to individual economies to decide whether to receive US visitors and the required documents for entry.

### Regional News

- **Thailand** will allow some domestic flights to and from Bangkok and other high-risk areas to resume from September 1 to help boost economic activity. Local flights can fly up to 75 percent capacity, while passengers will have to follow travel conditions required at destinations, including proof of vaccinations and COVID-19 test results.
- Daily infections reached a new high in the Philippines yesterday, after more than 22,300 cases were recorded. Total new infections reported so far in August stood above 387,000, more than twice the figure for July. Authorities over the weekend extended restrictions in the capital region and select provinces to September 7.

### Vaccine News

- **Australia** is set to receive 500,000 doses of the Pfizer-BioNTech vaccine from Singapore this week, to be returned later this year. The vaccine swap deal will help Australia speed up its vaccination program amidst an ongoing outbreak of the delta variant. Singapore has fully vaccinated at least 80 percent of its population, while Australia's pace is currently below 28 percent.
- The **US** Centers for Disease Control and Prevention confirmed that no deaths have been reported in young adults due to a rare heart inflammation known as myocarditis, a known side-effect of the Pfizer-BioNTech and Moderna vaccines.
- **Israel** has started providing COVID-19 boosters to children as young as 12 years old. Around 2 million out of its population of 9.3 million have received three vaccine doses.

## ASEAN+3 and Selected Economies: Total Vaccines Administered

Source: Haver Analytics, sourced from Our World in Data; and AMRO staff calculations.

Note: Single vaccination doses only. This does not measure the number of people vaccinated, as two doses are required with most available vaccines. Data is reported at irregular intervals; numbers show latest available.

## ASEAN+3 and Selected Economies: Vaccinations and Aspired Population Coverage

Sources: Our World in Data via Haver Analytics; various media sources; Economist Intelligence Unit; and AMRO staff estimates and calculations.

Note: Percent of population vaccinated shows total administered doses divided by two to reflect the two-dose regime of most vaccines—it does not necessarily reflect the actual number of fully vaccinated people. Aspired 2021 targets and completion dates of widespread vaccination are goals, forecasts, or estimates.
