Statistics

- Almost 1,900 new cases were reported across the **ASEAN+3 region** yesterday.
- Daily confirmed cases remain elevated in **Indonesia** with 847 newly confirmed cases yesterday. **The Philippines** confirmed 579 cases.
- **Singapore** reported 386 newly confirmed cases, continuing its downward trend. All but 2 cases were found among foreign workers residing in dormitories, a group which accounts for around 94 percent of all infections in Singapore.

News

- An official with the WHO has said that transmission of the coronavirus from asymptomatic carriers is very rare. The comment is based on reports of contact tracing from different countries which have followed asymptomatic cases and their contacts and are not finding secondary transmission.
- The journal Nature published the first peer-reviewed paper on the impact of large-scale anti-contagion policies. The study finds that measures such as closing schools, social distancing or travel restrictions may have prevented around 62 million confirmed cases in China, Korea, Italy, Iran, France, and the United States. The authors estimate that these 62 million confirmed cases roughly correspond to 530 million total infections, most of which would have been mild and gone undetected.

Notes: New cases since previous day. Δ% refers to percentage change since previous day. Fatality rate measured as deaths per confirmed infections.

1/ Since January 31, 2020.

2/ Recovery rate is a proxy for the stage of the cycle.
