## Statistics

- **Singapore** reported 408 new cases yesterday, all of them among foreign workers residing in dormitories. This is the first time no cases outside foreign worker dormitories have been reported since the government started to report these separate statistics.
- **Hong Kong** reported 3 new cases, related to a new local cluster after confirming the first locally transmitted cases in more than two weeks.
- Outside the region, **Iran** continues to report a considerable second wave of infections. Almost 3,000 new cases were reported yesterday, the highest number of daily infections in almost two months, and only 200 cases less than the highest daily increase at the height of the first wave end-March.

## News

- **China's Wuhan** has seemingly tested its entire population of 11 million people and found some 200 asymptomatic cases. The testing is likely to reassure residents and businesses and remove stigma against the city's population.
- One method applied in the mass testing effort has been batch testing—assessing up to 10 samples simultaneously. If a batch shows positive results, individual tests can then help to determine which person in the batch is infected. This method is efficient only amid a low overall infection rate.

## Overview of Confirmed COVID-19 Cases

Data as of 1/6/2020

| Economy           | Total Cases | Cases per 1M Population | New Cases | New Cases per 1M Pop. | New Cases (7-day avg) <sup>1</sup>  | ΔNew Cases | Δ% New Cases | Total Deaths | New Deaths | Fatality Rate (%) | Total Recovered | Recovery Rate (%) <sup>2</sup> | Active Cases |

Notes: New cases since previous day. Δ% refers to percentage change since previous day. Fatality rate measured as deaths per confirmed infections.

1/ Since January 31, 2020.

2/ Recovery rate is a proxy for the stage of the cycle.
