Global Coronavirus Cases	ASEAN+3 Coronavirus Cases	Plus-3 Coronavirus Cases	ASEAN Coronavirus Cases
2,708,885 Total Cases	141,977 Total Cases	106,915 Total Cases	35,062 Total Cases
738,486 Recovered Cases (27.3%)	97,675 Recovered Cases (68.8%)	88,631 Recovered Cases (82.9%)	9,044 Recovered Cases (25.8%)
190,858 Deaths (7.0%)	6,476 Deaths (4.6%)	5,204 Deaths (4.9%)	1,272 Deaths (3.6%)
1,779,541 Active Cases (65.7%)	37,826 Active Cases (26.6%)	13,080 Active Cases (12.2%)	24,746 Active Cases (70.6%)

Statistics

- **Worldwide** confirmed cases surpassed 2.7 million, with more than 190,000 deaths reported.
- Around 2,650 new cases were reported across the **ASEAN+3 region** yesterday, for a total of almost 142,000 confirmed cases.
- **Indonesia** confirmed 357 new cases, **Japan** reported 856, and in **Singapore**, another 1,037 new cases were confirmed, the majority from migrant dormitories.

News

- As of today, **Indonesia** will temporarily ban domestic air and sea travel (with some exceptions, e.g., for cargo). The air travel ban will be in place until June 1, the sea travel ban until June 8.
- For a third time, **Malaysia'** Movement Control Order (MCO) has been extended. The MCO will now run at least until May 12. For the last week, daily new confirmed cases in Malaysia have dropped to double digit figures.
- In the **Philippines**, the lockdown for Metro Manila and other areas of the main Luzon island has been extended for another two weeks until May 15. Further provinces are now also included in the lockdown, while restrictions in lower-risk regions of the country will be eased.
- Results from the first Remdesivir randomized clinical trial, an antiviral drug, which were inadvertently posted on the WHO website and have since been removed, argue that the drug is not effective. Its manufacturer was quick to point out, though, that the study was terminated early due to low enrolment, and is thus not statistically meaningful.
- To better understand at which stage countries are in the pandemic, AMRO has developed a "**Covid Cycle**"—a high-frequency indicator that could help identify the infection and recovery stages of the ASEAN+3 and other economies, and possibly serve as a forward-looking input for analyses and policymaking. The accompanying note will soon be available on AMRO's [homepage](#).

Overview of Confirmed COVID-19 Cases

Data as of 23/4/2020

Economy	Total Cases	Cases per 1M Population	New Cases	New cases (7-day avg) ¹	ΔNew Cases ²	Δ% New Cases	Total Deaths	New Deaths	Fatality Rate (%)	Total Recovered	Recovery Rate (%) ³	Active Cases

Notes: New cases since last business day. Monday's data includes weekend data. Δ% refers to percentage change since last business day. Fatality rate measured as deaths per confirmed infections.

^{1/} Since January 31, 2020.

^{2/} As new data is recorded on business days only, Monday's data includes weekend data. For ease of comparison, ΔNew Cases for Monday's data is based on the 3-day Saturday-Monday average.

^{3/} Recovery rate is a proxy for the stage of the cycle.
