Note: Net zero emissions refer to cutting GHG emissions to as close to zero as possible, with any remaining emissions reabsorbed from the atmosphere, for instance, by oceans and forests. Carbon neutrality refers to net zero emissions of carbon dioxide, the most common GHG. Targeted greenhouse gases (GHGs) in countries' Nationally Determined Contributions vary. They may include, in addition to carbon dioxide, hydrofluorocarbons, methane, nitrogen trifluoride, nitrous oxide, perfluorocarbons, and sulphur hexafluoride. ASEAN = Association of Southeast Asian Nations; BAU = business as usual; ECB = European Central Bank; ETS = Emission Trading System; EU = European Union; FY = fiscal year; GDP = Gross Domestic Product; LULUCF = Land Use, Land-Use Change and Forestry; MtCO<sub>2</sub>e = million tons of carbon dioxide equivalent; NDC= nationally determined contributions; RE = renewable energy; SDG= sustainable development goals; SEC= Securities and Exchange Commission TCFD = Task Force on Climate-Related Financial Disclosures; US = United States. Amounts in euros (EUR) have been converted to US dollar (USD) using end-May 2023 USD/EUR rate of 1.068.
